

	WEEK	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	
<b>PREPARATION</b>																								
Prepare research ideas																								
Think of people to give you the help you need																								
Discuss your ideas with people you choose to help you																								
Prepare initial research question (RQ)																								
<b>RESEARCH ETHICS - planning 'good' research</b>																								
Revise the TRREEE principles and identify key issues																								
Plan how to deal with ethical issues in your research plan																								
<b>DATA COLLECTION</b>																								
Decide what sort of data you need to answer your RQ																								
Identify who has the data you need / where to find data																								
Prepare your data collection and data analysis plans																								
<b>BACKGROUND DATA</b>																								
Collect background data																								
Review what the data contributes to answering your RQ																								
Consider what more information you need																								
Consider if the research question could be made better																								
<b>PRIMARY DATA</b>																								
Prepare information for participants																								
Prepare consent forms for participants (if needed)																								
Prepare data collection materials (e.g., surveys, interview Qs)																								
Contact participants to enrol their help with the research																								
Collect data																								
<b>DATA ANALYSIS</b>																								
Check there is sufficient, relevant data to answer the RQ																								
Review the research question																								
Analyse the data																								
<b>DISEMINATING RESULTS – Share results</b>																								
Plan what results to share and with who																								
Share your results
